Response to Amendment

1. The terminal disclaimer filed on 8/28/2009 disclaiming the terminal portion of any patent granted on this application, which would extend beyond the expiration date of copending Application (10/673,894) has been reviewed and is accepted. The terminal disclaimer has been recorded.
2. Based on applicant's amendment, filed 10/20/2008, see page 1 through 22 of the remarks, also telephone interview filed on August 18, with respect to cancellation of claim 37, and amended claims 1, 20, 30 and 39, have been fully considered and are persuasive, upon further consideration the double patenting rejection and rejection of 35 USC 101, 102 (e), 103(a) for claims 1-36 and 38-39, are hereby withdrawn.

The claims 1-36 and 38-39 now renumbered as 1-38 are allowed.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance.

This invention relates generally, to the art of watermarking digital video, and more particularly, to including additional information within the digital video information.

Based on applicant's amendment, with respect to claim 1 representative of claims 20, 29 and 30 the closest prior art of record (Reed and David), Reed reference is directed to selective color masking of images, and David reference is directed to active and semiactive radars, and more particularly to radar-receiver signal processors matched to coherently pulsed radar signals in a moving-target environment, and more particularly to techniques for providing enhanced signal-processing gains in such signal processors, but neither Reed nor David teach or suggest, among other things, " automatically replicating at least selected ones of bits of additional information to be impressed upon a video signal by placing said bits into at least one selected bit

of an average value of a chrominance portion over a block of said video signal; and automatically supplying said original and replicated bits to be impressed in the same block position in successive frames”.

Additionally claim 36 representative of claim 38, the closest prior art of record (Reed and David) do not teach or suggest, among other things, “an extractor for extracting said non-video information from said video signal; and a sequence processor receiving at least said extracted non-video information and detecting at least one prescribed sequence that was impressed upon at least one frame of said video signal and for determining a number of errors in said at least one prescribed sequence for each of a plurality of grouped frames; and a frame weighting unit which uses a per-frame quality measure derived as a function of said number of errors in each of said plurality of frames to combine extracted like-block positioned non-video information from said plurality of frames into an output value for said block position for grouped frames”.

These key features in combination with the other features of the claimed invention are neither taught nor suggested by (Reed and David) prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
